For the finest quality reconstituted sandstone

## Fibre Reinforced Cement Column Caps and Bases

R A N G E

WilsonStone's Fibre Reinforced Cement Caps and Bases are designed to fit most columns manufactured in South Africa and are unique for the following reasons:

1. They are very light, between 3-5kgs. depending on the size.
2. They can be nested for transport purposes.
3. They do not affect the overall column height – the column fits through them.
4. They will not corrode in harsh environments.
5. They are paintable.
6. They form a permanent shuttering for concrete.
7. They are 100% asbestos free.
8. They are constructed using recycled materials.
9. There are no seams or joint lines.

WilsonStone's Fibre Cement Column Caps and Bases are not precast concrete and are therefore lighter and stronger. Handling is therefore far more manageable as the caps and bases can be lifted and carried with one hand.

The lightweight structure and nesting ability means they can be transported cost effectively to all parts of the country. Fibre Cement Caps and Bases are also more resistant to chipping and cracking as they are not made from precast concrete.

### Installation

The Caps and Bases are designed to slide over the columns and can be fastened in place with polyurethane foam, which is available at any hardware store. Don't be fooled by the foam – this is a permanent method and once the foam has dried the cap or base will very difficult to remove without breaking it off, so be sure to position your caps and bases accurately. The bases and caps can also be used as shuttering for concrete and therefore do not need to be plastered or rendered.

## Sizes

Column Size	Internal Dia for Cap / Base
200	226
250	276
300	326

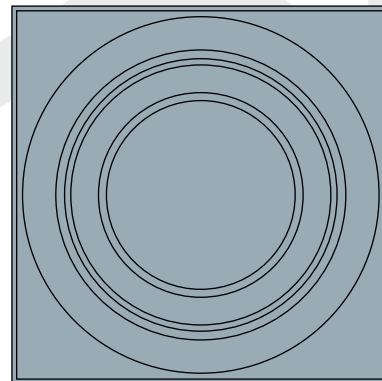

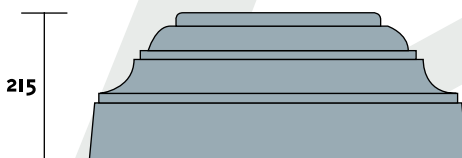

WCB 1

WCB 2

WCB 3

The designs can be interchangeable on a specific column – i.e. you could use WCB 2 as a cap and WCB 1 as a base.

**Note: these are standard designs, custom designs can be produced on request.**
